

KONICA MINOLTA

OPS+ Security

At your service for peace of mind and to ensure you that your corporate data and valuable company information is safe and protected against data theft? Today's MFPs (multifunctional peripherals) offer a huge range of functions and choices – which unfortunately goes along with a similarly wide range of potential security loopholes.

Konica Minolta's answer to this is the reliable protection of bizhub SECURE: together with you, we determine which of our industry-leading security standards are right for you. With this set of security measures, we give your Konica Minolta bizhub MFP and especially its HDD an extra level of protection to ensure that your data is more than secure – it's bizhub SECURE!

JUST WHAT YOU NEED SECURE DATA

You might have read recent reports that questioned the security standards of some multifunctional office systems. And you're right to be asking some critical questions: "How can I be sure my valuable data are safe from theft?" or "How can I prevent data being stolen from my multifunctional device or extracted when the hard drive is removed?" The questions are far-reaching, but the answer is simple. If your multifunctional device is a bizhub from Konica Minolta, all there is to do is activating the devices built-in security features. That can be done on your premises – or prior to delivery if you haven't yet decided which device to buy. Once bizhub SECURE safeguards are in place, you can be sure your print data will enjoy uncompromising security protection. Your bizhub multifunctional device and its hard drive (HDD) will be protected to ensure your data is more than just secure – they'll be bizhub SECURE!

How to avoid security breaches

Since the risk of security breaches is rising dramatically, we have made print data security a top priority for our business devices and services. Check this YouTube video to find out more:

YOUR MOST VALUABLE AND VULNERABLE BUSINESS ASSETS

Of all your business assets it is quite possible that your data is the most valuable – and most vulnerable. But securely safeguarding those assets could not be simpler: bizhub SECURE protects your documents, data and corporate information, thus avoiding any potential damage to your company's finances and reputation.

Reassuring peace of mind

Hackers can relatively easily access devices if the default password has never been changed. So we make sure each admin password is changed from default mode to a unique and secure password to prevent unauthorised access. We also equip each bizhub device with a control mechanism to ensure the admin password is most securely set, i.e. with a sufficiently safe combination of characters and numbers.

Password-protected documents and hard drive no data can go astray

Business-critical documents can be stored in a password protected box or folder on the bizhub device's hard drive. If you want an even higher level of security, the hard drive can be encrypted to prevent data being read, even if the hard drive is removed. Though it isn't easy to remove a hard disk from an office device, a bizhub hard disk can be locked in via an extra password that makes it impossible to read or access the data if the drive is removed and installed elsewhere.

Automatic deletion of print jobs

When documents are printed in your business, lots of potentially confidential data gets sent to the printer and temporarily stored. To prevent access to such data, bizhub SECURE can be set to automatic deletion mode – yet another way of safeguarding business-critical data on your bizhub device.

Continuous real time status of your security settings

For your peace of mind you can choose an optional application that highlights at a glance if all your security settings are still in place and re-enforced.

3 Key Consideration for your printing security

AUTHENTICATION –

Is accessing your printing facilities safe?

DATA PROTECTION –

What happens to your data after you send it to print

AUTOMATED RULES ENFORCEMENT –

Are your safeguards still in place?

bizhub Secure covers these three areas and gives you peace of mind when it comes to your printing security.
